PROFESSIONAL SUMMARY

Results-driven Software Engineer with 2+ years of experience designing, developing, and maintaining full-stack enterprise applications using Java, Spring Boot, and React. Proven expertise in REST API development, JWT authentication, role-based access control, and microservices architecture. Specialized in financial and insurance domains, contributing to high-volume premium transaction processing, refund handling, and account reconciliation systems. Independently architected and deployed a full-stack healthcare platform end-to-end, including containerization, database migration, and cross-environment production debugging. Committed to writing clean, scalable code with a focus on system reliability and production stability.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, HTML, CSS

Backend: Spring Boot, Spring Security, Spring MVC, Hibernate/JPA, REST APIs, JWT, Microservices

Frontend: React.js, Redux.js, TypeScript, Tailwind CSS, Bootstrap

Databases: MySQL, MongoDB

DevOps & Messaging: Docker, Render, Redis, Apache Kafka, Git, GitHub, Maven, Postman

Tools: IntelliJ IDEA, VSCode, GitHub Copilot

CS Fundamentals: Data Structures & Algorithms, OOP, SDLC, Role-Based Access Control

WORK EXPERIENCE

Tata Consultancy Services

Software Engineer

June 2024 – Present

Thane, Maharashtra

- Designed and maintained Java/Spring Boot microservices for the Accounts module of an enterprise insurance platform, handling premium transactions, refunds, commission processing, and account reconciliation.
- Defined and implemented RESTful APIs with robust validation and error handling per insurance domain requirements, improving accuracy of premium adjustments and payment tracking.
- Integrated React/TypeScript microfrontend components with reusable, maintainable front-end patterns and clean separation of concerns across the platform.
- Wrote JUnit unit tests and contributed to automated API regression validation with Postman; performed change request analysis and code reviews within an Agile team.

Nice Software Solutions

Software Engineer Intern

March 2024 – June 2024

Nagpur, Maharashtra

- Built HR module frontend for NEST, an internal employee management system, developing forms, data tables, and dashboard pages consuming Spring Boot REST APIs.
- Managed API calls, JSON parsing, component state, and data rendering across multiple HR workflows using React.js.

KEY PROJECTS

Healthcare Service Management System | React, Spring Boot, MySQL, JWT, Docker, Render, Aiven, Vercel | GitHub Backend | GitHub Frontend

- A full-stack healthcare platform where patients register, book appointments with doctors, and access their medical reports and visit history; doctors review and approve appointment requests while managing their schedules and patient interactions; and admins oversee user role management, profile administration, and system-wide operations through a dedicated dashboard.
- Took complete end-to-end ownership from architecture to deployment, secured REST APIs with Spring Boot, JWT authentication, and RBAC, and built a responsive React + Tailwind CSS frontend with reusable, maintainable component patterns.
- Independently containerized the backend with a multi-stage Docker build and deployed it to Render with a managed Aiven MySQL instance, while deploying the React frontend on Vercel with environment-based API configuration.

Genisys Configurator | TCS | *Java, Spring Boot, Hibernate/JPA, MySQL, REST APIs*

- Enterprise insurance product configurator enabling business users to define policy structures, premium calculations, and underwriting rules without coding.
- Worked on Accounts module — premium transactions, refunds, commission handling, and account balancing via REST APIs and Spring Data JPA.

NEST – Organization Management System | Nice Software Solutions | *React.js, Spring Boot, SQL*

- An internal enterprise platform to manage organization-wide operations, spanning HR, attendance tracking, finance, and internal communication (including an internal blogging/announcement module).
- Developed the HR module frontend — dynamic forms, data tables, and multi-page UI consuming Spring Boot REST APIs backed by SQL.

EDUCATION

BE in Information Technology

Priyadarshini College of Engineering | CGPA: 7.68 / 10

Nagpur, India

Aug 2019 – May 2023
